

Single-availability

This page displays more details on a specific hotel: hotel name, address and contacts information on top, followed by five tabs with other hotel data:

- **Summary** : mainly a marketing-oriented description text on the hotel, check-in/out times, number of rooms and hotel amenities information
- **Hotel details** : features of the hotel
- **Photos** – allows the user to browse a set of pictures on the hotel
- **Location and Map** - displays the hotel on a dynamic map
- **Room and Rates** – detailed data on rooms and rates available

Description	Policy	Price/night	Estimated Price

1 queen bed nonsmoking stay connected with free High speed internet access and local calls.		195.74 EUR (259.00 USD)	227.26 EUR (300.70 USD)	Book

Search

The search can be done according to the city or airport / the address or landmark / business.

The auto-complete display is available for all search types.

Advanced search

The “More options” section displays other criteria to improve the hotel search.

This panel is hidden by default, and will expand when you click on it.

The following features are proposed in this search:

- **Hotel class** (category: Luxury, First, Standard, Tourist, All)
- **Hotel chain** (up to three choices)
- **Search hotels with facilities** (Business Centre, Disabled, Restaurant, Room Service, Health Club, Swimming Pool, Meeting Room, etc.). You can select up to three facilities.
- **Maximum price**

Searching and booking hotels has never been easier

With the renewal of the Amadeus e-Travel Management graphical interface, discover a web 2.0-like look and feel and make the most out of the central mapping system based on BING maps*: easier and more intuitive visualisation, search and navigation, through a range of hotel selections, locations' comparison, amenities, policy compliance, availability and prices.

The Map view

The map is centred on the search point, and the hotels displayed are the returned results of the search aligned with the rules that apply. The map can be moved around without generating a new search.

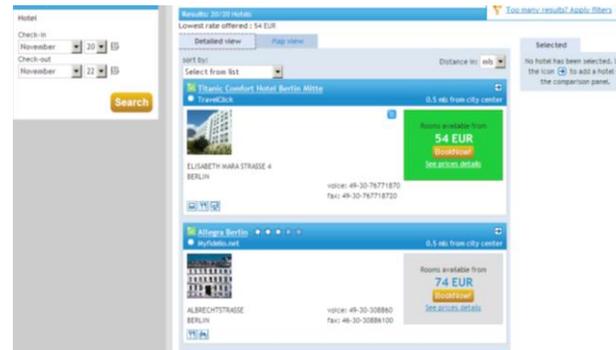

Each hotel is represented by a marker on the map. A mouse over on a marker displays the hotel widget, containing more information about the current property (hotel name, star rating, pictures, etc.).

When too many hotels are close to each other, depending on the zoom level, they can be displayed in a cluster. Upon mouse over on the cluster marker, a widget is displayed showing the list of hotels within it (hotel name, policy information, and price). This view can also incorporate business locations' logo (with the name and address on mouse over) facilitating even more your organisation.

*by global technology leader Microsoft ®

The detailed view

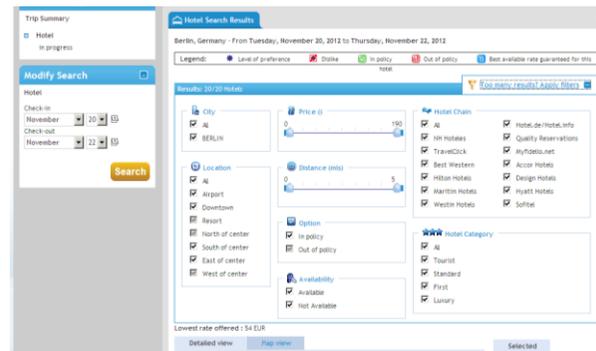

This view lists the hotels returned with detailed information on each property (name, price, amenities, address, contacts rules and policies ...).

In both views, the cheapest hotel amongst all hotels in the results list is highlighted (with a green marker in the Map view or a green background price in the Detailed view).

Filters

Additional filters can be applied instantly to help you narrow down the choice quickly and get the best deal.

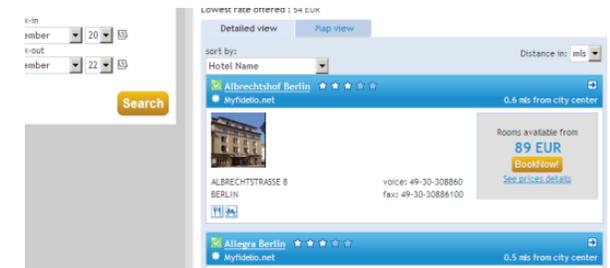

BookNow! – hotel flow

Directly from the map or the list, **BookNow!** takes you to the end of the hotel booking flow straight away, skipping

the single-availability page, once the cheapest price or referred rates (according to your settings) are displayed stage. Save time and choose between several rooms upfront. This flow is visible in the detailed view.

Rates availability on the hotel list – alternative hotel flow

When this feature is on, click on “View preferred rates” to preview different rooms available, at the multi-availability

Standard flow

If neither “BookNow!” nor “Rates availability on the hotel list” are activated, the flow remains as is: multi-availability and then single-availability steps, from the map view and the list view.

Compare hotels

Either from the map view or from the detailed view, click on **Compare** to compare hotels and visualise them side by side. The travel arranger can conveniently present various choices to the traveller by e-mail or print and add free text.
